 - December 6th –Spokane, Host -Ben Myers, Providence Sacred Heart Medical Center
7. Newline Articles Submissions –Please keep in mind all members can submit news articles and they only need to be a couple of paragraphs. These articles can be related to anything to do with Health Care Facilities Management that you feel our members may find valuable.
 - March- Anthony Schoen, Principal, MW Consulting Engineers **Submitted 2-15-19**
Brief article Description;
 - **The Fire Marshall has been citing facilities throughout the State of Washington due to compliance concerns relating to the fuel storage requirements outlined in the 2010 version of NFPA 110, as adopted by the 2012 version of NFPA 99. In many cases, this citation does not necessitate correction, as it may be addressed using an alternate compliance path.**
 - **Several factors should be researched and considered prior to implementing revisions to bring your existing fuel storage system up to the current code requirements.**
 - June-Dan Conway, Lincoln County Hospital
Air quality in your facility during wildfire season;
Increased outdoor temperatures and heat waves will lead to greater chances of wildfires.
With Wildfire season just around the corner it’s an important reminder to put the adequate filters in place in advance... Wildfires can cause temporary large increases in outdoor airborne particles, and substantial increases in gaseous air pollutants such as carbon monoxide, nitrogen dioxide, formaldehyde, and acetaldehyde.
The ability of an air filter to filter particular matter is categorized according to the MERV Rating Chart.
In order for your HVAC system to operate correctly and filter your air, proper air filter maintenance and monitoring are essential. When you fail to maintain your air filter or use the incorrect air filter, it can cause your HVAC system to work harder and increase your indoor air pollution.

Eastern Chapter Meeting - Agenda

September 6th , 2019

10am-2pm

Samaritan Healthcare

801 Wheeler Road, Moses Lake, WA. 98837

Room 405, on the fourth floor

Host – Rob Huit

Implementing a quality charcoal filter with the correct merv rating for your HVAC system will increase your chances of better air quality within your building envelope.

Filters with ratings higher than 14 or more are typically recommended for hospitals, surgery centers and clean rooms. ASHRAE has a comprehensive PDF guide to air cleaning and filtration for large buildings.

- September-Ben Myers, Providence Sacred Heart Medical Center
- December-Jonathan Lewis, Klickitat Valley Health

Advocacy and Networking

- State Board Updates –Mr. President-Jonathan Lewis
- ASHE Advocacy Update –

Growth and Communication
